Bangalore, IN

TECHNICAL SKILLS

- **Languages:** Python, TypeScript, Java 21, JavaScript, Bash, SQL
- **Testing Frameworks:** PyTest, Playwright, TestNG, JUnit, RestAssured, Selenium, Jasmine, Ranorex, Allure
- **AI & LLM Tooling:** LangChain (LCEL), Claude Code Agents, MCP Servers, AWS Bedrock, Pydantic
- **Cloud & CI/CD:** AWS Lambda, SNS, SQS, DynamoDB, SAM, Bedrock — Jenkins, GitHub, UNIX/Linux
- **Observability:** DataDog, New Relic, Coralogix
- **Integrations:** Jira REST API, Confluence REST API, TestRail, Postman, Slack API, Google Sheets API

EXPERIENCE

- **Jumio Corporation** Bangalore, IN
SDET-3 / Team Lead *June 2024 – Present*
 - **Event-Driven Microservices Test Framework:** Designed and built a Java 21 automation framework for end-to-end validation of AWS event-driven microservices; capabilities include SNS filter policy validation, SQS async polling with configurable timeouts, mock DV Classifier with Consul config refresh, and multi-environment (EMEA/core) support; integrated into Jenkins CI/CD pipelines covering **15+ microservices** with **zero production escapes** post-release.
 - **Product Quality Ownership:** Owned end-to-end QA strategy for PI planning and sprint execution across Jumio Premium; scaled UI automation coverage from **10% to 50% in 3 weeks**, achieved **100%** functional coverage across **25+ merchant configurations**, reduced manual testing overhead by **40%**, and maintained a **95%** on-time delivery rate with a **25%** reduction in story spillovers.
 - **Team Leadership & Mentorship:** Lead SDET managing **2** junior engineers and coaching **5** SDETs on AI-assisted testing practices; drove **30%** team throughput improvement with a **4-week** full-independence milestone; served as technical interviewer during hiring; established code review standards and improved team quality metrics by **35%** while reducing defect escape rate.
 - **AI Test Management Platform — TestGenie:** Architected and shipped a full-stack test management SaaS (Java 21, Quarkus, React 18, AWS Bedrock, DynamoDB single-table design) that auto-generates test cases from Jira requirements; reduced manual test documentation effort by **70%** and accelerated test creation by **3x**; adopted across multiple product teams, built autonomously via AI-assisted development.
 - **AI Documentation & Test Pipeline — Bulldozer:** Built Python/LangChain (LCEL) pipeline integrating Jira, Confluence, and source repositories to autonomously reverse-engineer PRDs and API specs across **73+ microservices**; achieved **69%** knowledge coverage, reduced spec turnaround from days to minutes, and generates test plans, test cases, and automation scripts leveraging domain knowledge.
 - **AI Tooling Standardisation & Developer Enablement:** Designed and deployed team-wide AI tooling standard (Claude Code CLI, MCP servers, custom skills, Playwright browser agents) across QA, Dev, and PM teams; selection preceded by hands-on POC evaluation of **5** AI coding tools against the live codebase; eliminated repetitive manual effort and enabled autonomous background agents across departments.
- **Acko** Bangalore, IN
SDET-2 *August 2021 – May 2024*
 - **Enterprise Migration QA — Insurance Pricing Engine:** Architected test strategy for migration of bike pricing grid to a rule engine covering **500+** pricing rules and scenarios; built automated suite with exhaustive positive/negative data combinations and full traceability; reduced validation time from **3 days to 30 minutes (95% improvement)** with zero production defects post-migration.
 - **Cross-Platform Regression Suite:** Built unified regression framework for feature parity across **8 broker platforms**; standardized eligibility rules for plans and add-ons; achieved **90%** coverage of eligibility/pricing APIs; enhanced Allure reporting with detailed execution logs across **50+** test scenarios; adopted as team standard.

- **Framework Architecture & Developer Experience:** Introduced POJO/Lombok patterns reducing boilerplate by **40%**; built comprehensive Postman API collections for **10+** endpoints cutting integration ramp-up time by **60%** for **15+** team members; led peer code reviews and established reusable components adopted across **3** product teams.
- **Integrated Testing Ecosystem:** Implemented TestRail, Google Sheets, and Slack integrations to automate stakeholder notifications and isolate test data from codebase; reduced manual communication overhead by **80%** and improved test execution visibility across all product stakeholders.

Capgemini

Bangalore, IN

Associate Consultant

November 2018 – July 2021

- **Enterprise Automation Framework — Universal Studios:** Developed and maintained a Jasmine/JavaScript/Protractor enterprise automation framework supporting **300+** test cases at **95%** reliability; implemented robust test execution workflows and comprehensive reporting for a high-visibility entertainment client.
- **Technology Migration & Knowledge Transfer — Wabtec:** Migrated **150+** legacy test scenarios to Ranorex with zero functionality loss; designed and delivered a training program for **12** team members achieving **100%** certification within **6 weeks**; generated executive reports demonstrating **40%** reduction in manual testing costs and secured stakeholder sign-off via client demos.

KEY PROJECTS

- **TestGenie:** Full-stack AI test management SaaS built from concept to production — Java 21, Quarkus, AWS Lambda, DynamoDB (single-table), React 18, TypeScript, AWS Bedrock; auto-generates test cases from Jira tickets; **70%** documentation effort reduction; adopted across product teams at Jumio.
- **Bulldozer:** Python/LangChain AI pipeline reverse-engineering PRDs and API specs across **73+ microservices** from Jira, Confluence, and source code; **69%** knowledge coverage; generates test plans and automation scripts on demand using Claude Code Agents and MCP servers.
- **Custom Claude Code Skills (5+):** Production multi-agent architecture: `/generate-test-cases` (E2E/API/functional from Jira), `/product-manager` (autonomous PRD + OpenAPI spec generation), `/test-plan` (IEEE 829/ISTQB compliant), `/update-automation-status` (syncs Playwright blocks to YAML). Demonstrates practical GenAI integration in SDLC.

EDUCATION

• **Visvesvaraya Technological University**

Karnataka, IN

B.E. in Computer Science and Engineering

2018
